

OPTIMIZING USER, GROUP, AND ROLE MANAGEMENT WITH ACCESS CONTROL AND WORKFLOWS

Team ID: NM2025TMID02823

Team Size: 5

Team Leader: Golda M

Team member: Iyyappan K

Team member: Jaslin Mary R S

Team member: JEBA Jeneesha J

Team member: Jasmine Rusha D

AIM:

To automate ServiceNow administration by optimizing user, group, and role management with secure access controls and workflows.

PROBLEM STATEMENT:

In a small project management team consisting of a Project Manager (Alice) and a Team Member (Bob), efficient task management and accountability throughout the project lifecycle are crucial. The existing system lacks:

- Clear role definitions
- Proper access controls
- Structured workflows

PROJECT OBJECTIVES:

- Define and manage Users, Groups, and Roles in ServiceNow.
- Enable controlled access permissions through ACLs.
- Create a custom project table to track project-related tasks.
- Assign users to groups and roles based on responsibilities.
- Implement application access and workflows for smooth task management.
- Ensure accountability by using Flow Designer to automate task assignments.

PROCEDURES:

Step 1: Create Users

1. Login to **ServiceNow** with an admin account.
2. In the left navigation filter, type **Users**.
3. Select: All → Users (System Security → Users)
4. Click on **New**.

5. Fill in user details:
 - **User ID:** alice.p
 - **First Name:** Alice
 - **Last Name:** P
 - **Email:**alice@example.com
 - **Password:** (set as per policy)

6. Click **Submit**.

Repeat the process to create another user:

- **User ID:** bob.p
 - First Name: Bob
 - **Last Name:** P
 - **Email:**bob@example.com
 - **Password:** (set as per policy)
7. Verify both users are listed under **User records**.

Step 2: Create Groups

1. In the navigation filter, type **Groups**.
2. Navigate: All → Groups (System Security → Groups).
3. Click **New**.
4. Enter details:
 - **Name:** Project Team Group
 - **Description:** Group for project-related tasks and access.
5. Click **Submit**.
6. Group is now available under System Security → Groups.

Step 3: Create Roles

1. In the navigation filter, type **Roles**.
2. Navigate: **All → Roles (System Security → Roles)**.
3. Click **New**.
4. Create roles one by one:
 - **Project Manager Role** (Full control on Project Table, Task Table).
 - **Team Member Role** (Basic access to Project Table).
 - **u_project_table Role** (specific access to project table).
 - **u_task_table Role** (specific access to task table).
5. Save each role by clicking **Submit**.

Step 4: Create table

1. In the navigation filter, type **Tables**.
2. Navigate: **All → Tables (System Definition → Tables)**.
3. Click **New**.
4. Fill in details:
 - **Label:** Project Table
 - **Name:** u_project_table (auto-generated)
 - **Create Module:** checked
 - **Create Mobile Module:** checked
5. Under **New Menu Name**, enter: Project Table.
6. Define **Table Columns**:
 - Task Name (String)
 - Assigned To (Reference → User)
 - Status (Choice → Open, In Progress, Closed)
 - Priority (Integer)
7. Click **Submit**.

Step 5: Assign Users to Team

1. Navigate: **All → Groups → Project Team Group.**
2. Under the group record, scroll to the **Group Members** tab.
3. Click **Edit**.
4. Select **Alice P** and **Bob P** from the available users list.
5. Move them to the **Selected** list.
6. Click **Save**. Step

6: Assign Roles Assign

Roles to Alice

1. Navigate: **All → Users (System Security → Users)**.
2. Open the record for **Alice P**.
3. Scroll to the **Roles** tab.
4. Click **Edit**.
5. Add the following roles:
 - **Project Manager Role**
 - **u_project_table**
 - **u_task_table**
6. Move them to the **Selected** list.
7. Click **Save** and then **Update** the user record.

Assign Roles to Bob

1. Navigate: **All → Users (System Security → Users)**.
2. Open the record for **Bob P**.
3. Scroll to the **Roles** tab.
4. Click **Edit**.
5. Add the following roles:
 - Team Member Role
 - **u_project_table** (if limited access needed)
6. Move them to the **Selected** list.
7. Click **Save** and **Update** the user record.

8. (Optional) Use **Impersonate User** → **Bob** to verify access

Step 7: Assign Table Access to Application

1. When the **Project Table** was created, ServiceNow automatically generated an **Application and Module**.
2. Navigate: All → Application Menus → Project Table Application.
3. Open the module and click **Edit**.
4. Assign the following roles:
 - **Project Member Role** → For full access.
5. Save the application module.

Configure Task Table Application Access

1. Navigate: All → Application Menus → **Task Table Application**.
2. Open the module and click **Edit**.
3. Assign roles:
 - Project Member Role
 - **Team Member Role**
4. Save the application module.

Step 8: Create ACL

1. Navigate: All → Access Control (ACL) (System Security → Access Control).
2. Click **Elevate Role** (choose security_admin).
3. Click **New**.
4. Define ACL for the **Project Table**:
 - **Type:** Table.None / Table.Field
 - **Operation:** read, write, delete
 - **Role(s):** Assign Project Manager Role and/or Team Member Role
5. Save the ACL.
6. Repeat the process for the **Task Table**.

7. Verify by impersonating users (Alice and Bob) to ensure access is restricted correctly.

Step 9: Create a Flow to Assign Operations Ticket to Group

1. Navigate: All → Flow Designer (Process Automation → Flow Designer).
2. Click **New** → **Flow**.
3. In **Flow Properties**:
 - **Name:** Task Table Flow
 - **Application:** Global
 - **Table:** Task Table
 - **Trigger:** When a record is created

Build The Flow

1. Add **Action** → *Update Record*.
2. Set Assignment Group = Project Team Group.
3. Optionally add:
 - **Notification** to group members when a new task is assigned.
 - **Approval Step** for Project Manager (Alice).
4. Save the Flow.
5. Activate the Flow.

Testing

- Impersonate Bob → Create a new Task record.
- Verify the task is automatically assigned to **Project Team Group**.
- Check notification/assignment workflow.

Optimizing user group and role management in ServiceNow

The image shows three screenshots of the ServiceNow interface demonstrating the creation and configuration of user groups and roles.

Screenshot 1: Group - project team

This screenshot shows the creation of a new user group named "project team". The group has a manager assigned and no parent group. It contains two users: "alice p" and "Bob p".

Name	Manager	Group email	Parent
project team			

Screenshot 2: Role - project member

This screenshot shows the creation of a new role named "project member". The role is application-global and does not have elevated privileges. It is associated with two application menus: "task table" and "project table".

Title	Active	Order	Roles	Name	Updated
task table	true	100	u.task_table_user project member team member	task table	2025-09-19 23:20:02
project table	true	100	u.project_table_user project member	projectable	2025-09-19 23:18:24

Screenshot 3: Role - team member

This screenshot shows the creation of a new role named "team member". The role is application-global and does not have elevated privileges. It is associated with one application menu: "task table".

Title	Active	Order	Roles	Name	Updated
task table	true	100	u.task_table_user project member team member	tasktable	2025-09-19 23:20:02

CONCLUSION:

This project successfully demonstrated the optimization of user, group, and role management in ServiceNow by implementing access controls and automated workflows. With Alice and Bob having clearly defined roles, access permissions, and structured task assignments, the project team can now operate with clarity, accountability, and efficiency throughout the project lifecycle.
